CONTENTS OF VOLUME 32

NUMBER 1

S. E. Clift, P. Hartley, C. E. N. Sturgess and G. W. Rowe	1	Fracture prediction in plastic deformation processes
J. H. Lee and C. P. Burger	19	Finite element modeling of photoplastic processes: upset forging of rings
A. M. Othman and D. R. Hayhurst	35	Multi-axial creep rupture of a model structure using a two parameter material model
H. B. Shim and D. Y. Yang	49	An elastic–plastic finite element analysis on hydrostatic bulging of rectangular diaphragms by using layered degenerated shell elements
C. M. Lee, D. Y. Yang and M. U. Kim	65	Numerical analysis of three-dimensional extrusion of arbitrarily shaped sections by the method of weighted residuals

NUMBER 2

A. K. Jemah and F. W. Williams	83	Parametric experiments on stayed columns with slender bipods
D. Y. Yang, C. M. Lee and J. R. Cho	101	Analysis of axisymmetric extrusion of rods by the method of weighted residuals using body-fitted coordinate transformation
D. Y. Yang, H. S. Kim, C. M. Lee and C. H. Han	115	Analysis of three-dimensional extrusion of arbitrarily shaped tubes
J. R. Barber	129	Contact problems for the thin elastic layer
S. Bharath, B. C. Nakra and K. N. Gupta	133	A distributed mathematical model for pressure transient analysis in railway pneumatic brake system
A. Azarkhin and O. Richmond	147	A simple algorithm for predominantly plastic flows with free surfaces
	159	Abstracts from the *Chinese Journal of Mechanical Engineering*
Announcement	165	Asian Pacific Conference on Computational Mechanics

NUMBER 3

Special Issue

MODERN PRACTICE IN STRESS AND VIBRATION ANALYSIS

3–5 April 1989, University of Liverpool, U.K.

J. E. Mottershead	167	Editorial
W. M. To and D. J. Ewins	169	Structural modification analysis using Rayleigh quotient iteration
V. G. Colvin and T. R. Morris	181	Algorithms for the rapid computation of response of an oscillator with bounded truncation error estimates
C. D. Foster and J. E. Mottershead	191	A method for improving finite element models by using experimental data: application and implications for vibration monitoring
G. M. Chapman and M. Lucas	205	Frequency analysis of an ultrasonically excited thick cylinder
J. L. Horner and R. G. White	215	Prediction of vibrational power transmission through jointed beams
T. Naciri, P. Navi and O. Granacher	225	On harmonic wave propagation in multilayered viscoelastic media
G. R. Tomlinson	233	The use of constrained layer damping in vibration control
M. I. Chipalo, M. D. Gilchrist and R. A. Smith	243	A finite element technique for the investigation of the shape development of planar cracks with initially irregular profiles
A. D. Nurse and E. A. Patterson	253	A photoelastic technique to predict the direction of edge crack extension using blunt cracks
T. H. Hyde and N. A. Warrior	265	An improved method for the determination of photoelastic stress intensity factors using the Westergaard stress function
Announcement	275	Deterministic and Probabilistic Imperfection Sensitivity in Buckling of Structures. ASME Winter Annual Meeting

NUMBER 4

J. H. Yoon and D. Y. Yang	277	A three-dimensional rigid–plastic finite element analysis of bevel gear forging by using a remeshing technique
G. Lu and C. R. Calladine	293	On the cutting of a plate by a wedge
G. J. Turvey and M. Y. Osman	315	Elastic large deflection analysis of isotropic rectangular Mindlin plates
E. H. Mansfield	329	Large deflexions of a uniformly loaded, elastically restrained composite strip
Y. Tomita, T. Takahashi and A. Shindo	335	Neck and bulge propagation in polymeric cylinders under internal pressure
W. Johnson	345	The origin of the ballistic pendulum: the claims of Jacques Cassini (1677–1756) and Benjamin Robins (1707–1751)

NUMBER 5

Obituary	i	R. M. Caddell
M. E. Karabin and R. E. Smelser	375	A quasi-three-dimensional analysis of the deformation processing of sheets with applications
C. K. Sung and S. S. Shyl	391	A composite laminated box-section beam design for obtaining optimal elastodynamic responses of a flexible robot manipulator
P. Tuğcu and K. W. Neale	405	Cold drawing of polymers with rate and temperature dependent properties
E. H. Mansfield	417	Analysis of unbalanced multi-layered elliptical plates under linearly varying pressure
W. Johnson and S. Chandrasekar	423	Voltaire's contribution to the spread of Newtonianism—I. Letters from England: Les Lettres Philosophiques
K. Y. Lam, K. M. Liew and S. T. Chow	455	Free vibration analysis of isotropic and orthotropic triangular plates
Announcements	465	Israel Annual Conference on Aviation and Astronautics
	466	Conference on Advances in Marine Structures—2

NUMBER 6

A. Służalec	467	Thermal effects in friction welding
T. C. Triantafillou and L. J. Gibson	479	Multiaxial failure criteria for brittle foams
K. C. Chan and W. B. Lee	497	A theoretical prediction of the strain path of anisotropic sheet metal deformed under uniaxial and biaxial stress state
Zhou Weixian	513	A new non-quadratic orthotropic yield criterion
W. Johnson and S. Chandrasekar	521	Voltaire's contribution to the spread of Newtonianism—II. Élémens de la Philosophie de Neuton: The Elements of the Philosophy of Sir Isaac Newton
A. G. Atkins	547	Note on scaling in rigid–plastic fracture mechanics
Announcement	549	COMADEM 90 International, Second International Congress and Exhibition on Condition Monitoring and Diagnostic Engineering Management

NUMBER 7

Obituary	i	A. D. Tomlenov
M. M. Megahed	551	Elastic–plastic behaviour of a thick-walled tube with general nonlinear hardening properties
N. K. Gupta and S. K. Sinha	565	Lateral compression of crossed layers of square-section tubes
M. S. Saidi and H. Daneshyar	581	Unsteady one-dimensional flow with rotation
J. P. Singh and S. S. Dey	591	Transverse vibration of rectangular plates subjected to inplane forces by a difference based variational approach
M. J. M. Barata Marques and P. A. F. Martins	601	On the analysis of hot forging of artillery shells
Y. Tomita, A. Shindo and T. Sasayama	613	Plane strain tension of thermo-elasto-viscoplastic blocks
F. Tin-Loi	623	Post-yield behaviour of a rigid–plastic beam with partial axial and rotational end fixities
Announcements	631	

NUMBER 8

M. M. Megahed	635	Influence of hardening rule on prediction of cyclic plasticity in pressurized thin tubes subjected to cyclic push–pull
A. A. Dancig and E. A. Bunt	653	Wave interference effects on a double-hull ship model, as measured by gravity dynamometer
O. N. Oguoma and J. R. Baumgarten	677	Contact area of toroidal air springs
D. Y. Yang, W. J. Chung and H. B. Shim	687	Rigid–plastic finite element analysis of sheet metal forming processes with initial guess generation
H. Ramsey	709	Analysis of interwire friction in multilayered cables under uniform extension and twisting

NUMBER 9

Z. T. Zhang and J. L. Duncan	717	Developments in nodal strain analysis of sheet forming
C. Albertini, M. Montagnani, M. Życzkowski and S. Łaczek	729	Optimal design of a specimen for pure double shear tests
D. J. Dawe and V. Peshkam	743	Buckling and vibration of long plate structures by complex finite strip methods
D. A. Hills, D. Nowell and A. Sackfield	767	The state of stress induced by cylindrical sliding contacts with frictional heating
W. C. Chen and W. H. Liu	779	Deflections and free vibrations of laminated plates—Levy-type solutions
	795	Abstracts from the *Chinese Journal of Mechanical Engineering*
Announcements	799	

NUMBER 10

Y. S. Lee, T. J. Batt and P. K. Liaw	801	Stress analysis of a composite material with short elastic fibre in power law creep matrix

M. J. M. Barata Marques and P. A. F. Martins	817	A solution to plane strain rolling by the weighted residuals method
Y. Xu and T. X. Yu	829	The elastic–plastic wrinkling of rectangular plates subjected to locally uniform tension
H. B. Sharda, H. N. Chandrawat and R. C. Bahl	843	Stability study of an offset bearing including EHD effects
M. T. Schobeiri	851	The influence of curvature and pressure gradient on the flow temperature and velocity distribution
J. P. Dwivedi, P. C. Upadhyay and N. K. Das Talukder	863	Torsional springback in square section bars of nonlinear work-hardening materials

NUMBER 11

D. Y. Yang and T. S. Noh	877	An analysis of hydroforming of longitudinally curved boxes with regular polygonal cross-section
J. H. Vogel and D. Lee	891	An analysis method for deep drawing process design
Y. Narita and A. W. Leissa	909	Buckling studies for simply supported symmetrically laminated rectangular plates
B. F. Ronalds	925	Local buckling strength of plate outstands
F. P. E. Dunne, A. M. Othman, F. R. Hall and D. R. Hayhurst	945	Representation of uniaxial creep curves using continuum damage mechanics
Corrigendum	959	
	961	Abstracts from the *Chinese Journal of Mechanical Engineering*
Announcements	965	

NUMBER 12

N. M. Bujurke and N. B. Naduvinamani	969	The lubrication of lightly loaded cylinders in combined rolling, sliding and normal motion with couple stress fluid

A. Zeghloul, R. Mesrar and G. Ferron	981	Analytical expressions of the forming limits in biaxially stretched sheets
J. R. Barber and D. A. Billings	991	An approximate solution for the contact area and elastic compliance of a smooth punch of arbitrary shape
W. H. Lin and Y. M. Tsai	999	Fracture of an elastic strip containing a pair of collinear cracks perpendicular to the edges of the strip: theory and experiment
Xiaoping Lu and M. Comninou	1011	The equivalent elastic compliances of an elastic solid with interface cracks
G. I. N. Rozvany and W. Gollub	1021	Michell layouts for various combinations of line supports—I
